

Why Choose DOWN?

Down is nature's perfect sleeping accessory. Its supreme loft and softness creates a safe, cozy feeling without being overly heavy. Only down provides superior warmth, excellent breathability, and year-round comfort. As nature's most efficient insulator, down is generally perceived as the most comfortable and luxurious product for sleeping. Down is also a 100% renewable and sustainable resource that, when properly washed and processed, is hypoallergenic. The high thread count, cotton fabric that encases our down products feels soft to the touch and is tightly woven, keeping the down filling from escaping. The fabric also works as a barrier to allergens like dust mites, dander and pollen. Caring for down products is also easy and convenient. There's no need for costly dry cleaning, as most can be machine washed and dried. Adding a down duvet insert or blanket is seen as a luxurious indulgence to guests, and an energy efficient solution to reducing heating expenses in hotels.
